

LIGHT BAFFLES

Light baffles are ideal for use with a multiple screen application contained in a single frame.

Choose the Zero Gap Light Baffle in an edge-to-edge image application. The “wedge” shape allows the projected images to match seamlessly with virtually no visible gap between the screen panels and prevents light from one projected image from spilling over onto the screen panel beside it. To be used with Da-Plex projection screens $\frac{3}{8}$ " thick up to 60" high or $\frac{1}{2}$ " thick up to 84" high.

Choose the T-Mullion Light Baffle in an application where separate images are being projected on each screen panel and a small amount of space between each image is desired. The T-Mullion is 1" wide and features a flat black finished. To be used with rigid rear projection screens $\frac{1}{4}$ " thick up to 60" high, $\frac{3}{8}$ " thick up to 84" high and $\frac{1}{2}$ " thick up to 96" high.
